ABSTRACT OF THE DISCLOSURE

A balanced amplifier comprising a pair of voltageto-current converters including a first input terminal,
a second input terminal, a first output terminal and
a second output terminal to convert an input voltage
applied to the first input terminal into an output
current output from each of the first output terminal
and the second output terminal, the second input
terminal and the second output terminal of one of the
converters being connected to the second input terminal
and the second output terminal of the other of the
converters to cancel common-mode components each other
and extract differential-mode components.
